HEALTH & SOCIAL CARE - INTENT

We believe health and social care and child development are rooted in real world application. Our curriculum map reflects our high expectations for every child and allows students to develop knowledge and understanding of the caring sector along with key transferable skills of research and self-evaluation.

Our health and social care and child development curriculum develop effective communication skills with a range of different people in various situations enabling them to understand the importance of the qualities required to do this. Measuring and interpreting data about someone's physiological health in order to design a care plan to keep them safe, allows them to analyse and improve their health and wellbeing and the skills to self-reflect about choices they make and how they affect others. Being able to support people in maintaining their rights and the values of care along with the importance of these rights in delivering good care develops empathy and the self-awareness to become a responsible member of society who knows how to look after their own and other's well-being. We aim to develop student's ability to see other peoples needs and to have a charitable nature.

The study of health and social care and child development enables students to apply and develop existing skills to care settings building the foundations for a career in the care sector supporting their access to the workplace and progress to KS5 and beyond.
